

Web Tool for Phonemes Week-4

Agenda

- Word Dataset
- Phoneme Dataset
- Category Data
- Articulation Data
- Semantic Data
- Integration of all data

Word Dataset

- Scraped around 200k+ words

[https://raw.githubusercontent.com/matthewreagan/WebstersEnglishDictionary/master/
WebstersEnglishDictionary.txt](https://raw.githubusercontent.com/matthewreagan/WebstersEnglishDictionary/master/WebstersEnglishDictionary.txt)

Phoneme Data

- G2P model to generate the Phonemes for the words

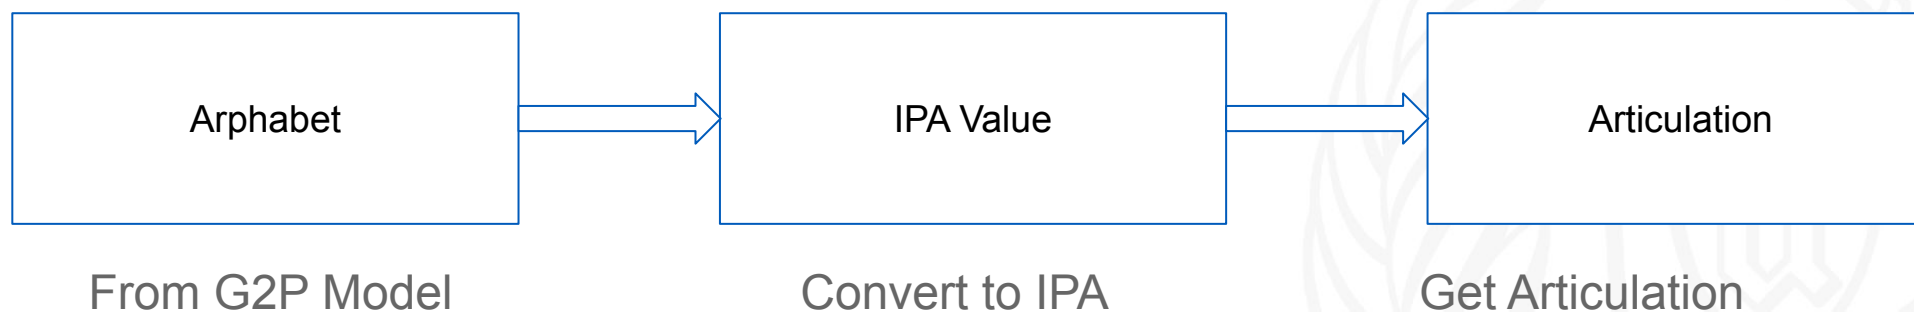

Category Data

- Wordnet

Articulation Data

Example :

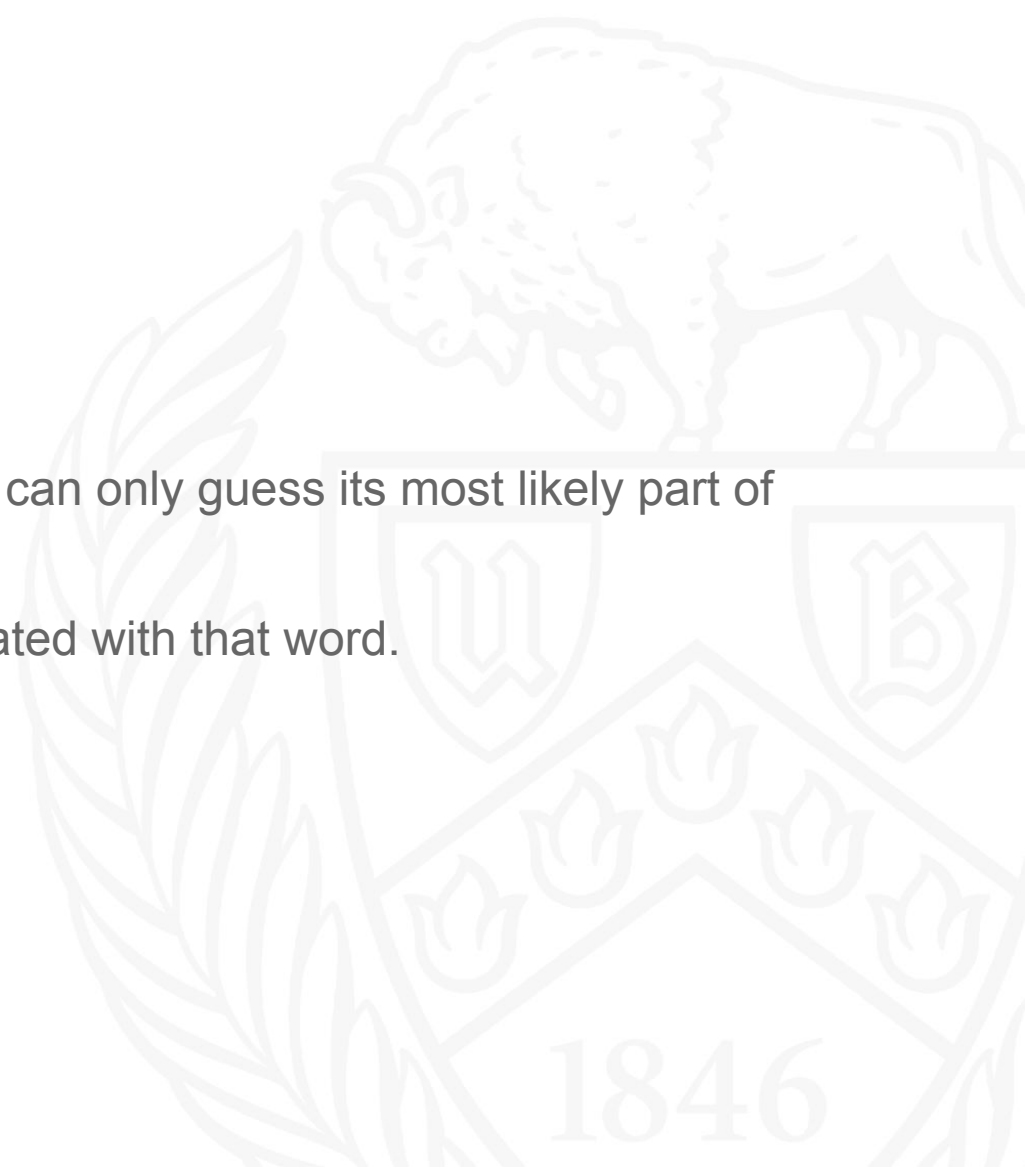

R OW Z AH Z

Semantic Data

- Wordnet
- Spacy

When given an isolated word without context, spaCy's tagger can only guess its most likely part of speech

whereas WordNet can list all possible parts of speech associated with that word.

Minimal Pairs

- sample queries
- Query in Solr

Integration of all data

Data management is crucial

Future uses

modification of dataset or methods to collect various data

documentation

Questions

1. GPU
